

Finding Scotland's Forgotten Generation MATPACT

Medication Assisted Treatment Pilot at Custody Toolkit

Authors: M Gillies, P Rusk, B Fraser

Background

- Scotland has the highest rate of drug related deaths in Europe.
- 19% of drug related deaths have been in custody in the 6 months prior to their death.
- Police Custody Healthcare Team identified 52% of patients at risk of drug related death were not referred to health.
- The referral system provided an inequity of care.
- This prompted the team to create an innovative approach to proactively identify those at risk and offer health intervention.

Aims and Objectives

- Increase number of take home Naloxone offered and accepted in Police Custody by 80% in 10 weeks.
- Increase number of BBV tests offered in police custody by 50% in 10 weeks.
- Increase number of referrals to health from police.
- Create and implement a toolkit to ensure equitable healthcare and harm reduction intervention in police custody.

Methology

- The team used quality improvement methodology to identify the quality issue, understand the problem and develop a theory of change.
- The model for improvement was used as their approach identifying aims, measurement and tests of change.
