

NHSGGC Deteriorating Patient Storyboard

Creating the Conditions

- Powerful coalition
- NHSGGC DP Steering Group with medical and nursing leads and Sector-based Steering Groups and Site Leads
- Clear vision set and communicated
- Engagement with ward teams

Understanding your system

- Process Mapping exercise for Cardiac Arrest reviews / data
- Structured response to Deterioration process mapping
- Pareto charts for ward-level Cardiac Arrest Data
- Days between arrests charted for individual wards
- Evaluation of Escalation Procedures and use of Escalation Boards

Aim

- 20% reduction in the NHSGGC Cardiopulmonary Resuscitation rate in acute care, by September 2023
- 35% reduction in the NHSGGC Cardiopulmonary Resuscitation rate in acute care, by September 2024
- 50% reduction in the NHSGGC Cardiopulmonary Resuscitation rate in acute care, by September 2025

Testing Changes

Tested and implemented new Escalation Boards across RAH Site

Tested E-Learning Video

Tested sticker template for Escalation to Medical Staff

Deteriorating Patient
Escalation Record for Notes

NEWS Score:
Date:
Time:

Review of all notes:
Yes ☐ No ☐

Escalation Plan completed:
Yes ☐ No ☐

If no escalation plan then complete next section:

Medical Review Required:
Yes ☐ No ☐

If no, why not?:

(see medical and nursing notes)

Name of Nurse:
Grade:

Details about Clinician Requested to Review:

Name of Clinician:
Grade:

Review Level:

Escalated to senior medic:
Yes ☐ No ☐

Escalated to consultant:
Yes ☐ No ☐

Nurse in charge notified:
Yes ☐ No ☐

Management Plan in place:
Yes ☐ No ☐

ADDITIONAL CONCERNS (See Medical/Nursing Notes):

Data

- RACE bundle completion charts displayed on wards

Rates of Cardiac Arrest to Dec 23

Enablers for success

- Defined ‘structured response’ as each element of ‘RACE’ completed (**R**ecognise dx, **A**ct on this with targeted treatment, **C**ommunicate issues, expectations and outlook, **E**scalation to more invasive interventions or higher level of care considered).
- Hospital Arrest review for Learning form Outcomes (HALO) meeting bimonthly – explore all arrests with potential learning to draw out common themes and trigger targeted local and hospital wide improvement efforts
- Development of share-point site
- MS Forms Data collection Tool for Structured response

A previous or current <u>community DNACPR</u> form not carried through to this admission	2
<u>Opportunity for a DNACPR</u> to be placed but not	9
<u>Delay to review</u> after evidence of deterioration	2
<u>Failure to respond</u> to evidenced deterioration	2
<u>DNACPR appropriate</u> but no clear <u>opportunity</u> during this admission	1
<u>Issue with NEWS</u> frequency	2
<u>Active DNACPR in place</u> but call still occurred	2

Next Steps

- Improve cardiac arrest data and processes with dedicated Data Analyst post
- Focus on improving reliability of Treatment Escalations Plans (TEPs)

Challenges we encountered

Capacity within Clinical Teams to engage with the programme is a key challenge
